

NAME OF SERVICE: Fire Ant Treatment Protocol

ATTRIBUTES: Check for attributes on the services for more treatment specifications.

TO INCLUDE: Fire Ants Interior/Exterior

COVERED PEST: Fire Ants

TREATMENT INCLUDES

- Interior:** Inspect the entire property indoors to determine if the target ants are fire ants.
- Inspect the entry points around windows, doors and weep holes.
 - If fire ants are prevalent in a downstairs bathroom, an access might be cut behind the bathtub. Fire ants have been known to tunnel under the slab and come up in the bath trap area.
 - Treatment on the interior must be conducted with a non-repellant liquid insecticide. This treatment should be along the baseboard area throughout all interior walls where activity is identified. Also, a light application of dust beneath the baseboards, in wall void and under kick plates in kitchens and bathrooms is needed.
- Exterior:** Inspect the entire exterior including the foundation and up to 8,000 sq.ft. of the lawn to determine where all the mounds are located.
- Any active fire ant mounds located on or within 3 feet of the foundation must be treated with a liquid insecticide mound drench for immediate results.
 - Treat the individual mounds found throughout the lawn area by applying the bait according to the label recommendations. DO NOT DISTURB THE MOUND WHEN TREATING AS THIS WILL INTERFER WITH THE SUCCESS OF THE WORKER ANTS TAKING THE BAIT BACK INTO THE NESTING SITE.
 - Treat the entire 8,000 sq.ft. lawn or as designated on the agreement by broadcasting fire ant bait using a hand held spreader.

SPECIAL NOTES/ATTRIBUTES:

On occasion, customers may request all fire ant mounds to be treated with a liquid application for immediate results. Make sure the material you are using is labeled for Fire Ants mound drench treatments.
